Where Data Meets Intelligence

TASK – I
DATA EXPLORATION AND SUMMARY

Data Exploration – Summary & Key Insights

Summary

- Dataset includes **40 investors** with an **average age of 27.8 years**.
- Average investments show preference for **Gold (5.98)**, **Debentures (5.75)**, and **Govt. Bonds (4.65)**.
- Majority of investors have diversified investment portfolios.

Key Insights

- **Education (60%)** is the most common savings objective, followed by retirement and healthcare.
- **Capital Appreciation** is the leading financial purpose (24 responses).
- **Age vs Expected Return** chart shows a wide spread across ages 20–35, indicating varying risk appetites.
- Participation in **Stock Market (0.88 Av)** and **PPF (2.03 Av)** is comparatively low.

Investment Behavior

High investment participation (close to 100%) across most categories.
Investors favor low-to-medium risk assets such as **gold**, **fixed deposits**, and **debentures**.
Scatter plot shows similar expected return trends for both genders.

Conclusion

The investor base is **young and goal-driven**, mainly focused on **education savings** and **capital growth**.
Investment choices reflect a preference for **stable, low-risk assets**, with limited exposure to high-risk options.
The dashboard effectively highlights financial goals, investment preferences, and demographic trends.

Tools Used

Power BI, **Power Query**, **DAX**,
Visuals: *Cards, Bar/Column Charts, Donut Chart, Scatter Plot, Slicers.*

TASK – 2
GENDER BASED ANALYSIS

SUMMARY

1. Gender Distribution & Participation

Males make up the majority of the dataset (62.5%), while females account for 37.5%.
Both genders show strong investor participation, with **93% of total respondents being active investors**.

2. Investment Trends by Gender

Males invest the most in **Gold** (6.0) and show strong preference for **Equity** and **Debentures**.
Females show the highest average investment in **Debentures** (5.9) and substantial investment in **Gold** and **Mutual Funds**.

3. Investment by Age Group

The **35–44 age group** has the highest overall investment across categories.
Gold and **Debentures** are consistently high across all age groups.
Younger investors (18–24) invest moderately but tend to diversify across asset classes.

4. Investor vs Non-Investor Behaviour

Only **8% are non-investors**, suggesting strong financial awareness in the surveyed group.
Investors are spread across all genders and age groups, indicating no dominant demographic driving participation.

CONCLUSION

This gender-based investment analysis reveals that both males and females actively participate in various investment avenues, with slight differences in their preferences:
Age plays a significant role, with **35–44-year-olds** being the most financially active and showing higher investment diversification.
The dataset demonstrates a **high level of financial engagement** across genders and age groups.
The insights can be used to tailor investment education programs, marketing strategies for financial products, and personalized advisory services.

TASK – 3
OBJECTIVE ANALYSIS

SUMMARY

1. Investor Objectives & Preferences

Capital Appreciation is the **most common investment objective**, making it the primary motivation for most investors.

Returns emerge as the **top decision-making factor**, showing that investors prioritize financial gain over liquidity or safety.

Gold is the **most preferred investment option (5.98 avg.)**, while the Stock Market ranks lowest (0.88 avg.), indicating low risk appetite within the dataset.

2. Investment Patterns by Objective

Investors focused on **Capital Appreciation** show strong investments in Gold, Government Bonds, and Debentures.

Growth-oriented investors prefer **Mutual Funds and Equity Markets**, reflecting a moderate risk-taking mindset.

Income-oriented investors lean toward safer instruments such as **PPF, Debentures, and Fixed Deposits**.

This highlights how **objectives directly shape investment choices** across asset classes.

4. Total Investors by Purpose

The majority of investors (32 out of 40) list **Wealth Creation** as their primary purpose for investing.
Savings and Returns represent a smaller share, with Returns being the least selected purpose but still influential as a key factor.
This shows a strong overall inclination toward **long-term financial growth** rather than short-term needs.

Investment Averages Across Assets

Gold, Government Bonds, and Debentures show overall high average values across objectives.
Equity Market and Mutual Funds show moderate interest, largely driven by growth-seeking investors.
PPF and Fixed Deposits remain stable but less dominant, reflecting a preference for safer but moderate-return options.

Conclusion

The Objective Analysis reveals that investors predominantly seek **Capital Appreciation and long-term wealth growth**. Gold remains the most trusted and preferred investment option, while the Stock Market receives minimal interest, indicating a generally risk-averse investor base.

TASK – 4
INVESTMENT DURATION FREQUENCY

SUMMARY

1. Investor Duration & Monitoring Preferences

Medium-term (3–5 years) is the most common investment duration, making it the preferred horizon for the majority of investors.

•**Monthly monitoring** emerges as the leading review frequency, indicating that investors prefer steady, periodic oversight rather than frequent tracking.

•**Weekly and daily monitoring** remain less popular, showing that most investors are not inclined toward high-frequency monitoring.

2. Monitoring Patterns by Duration

Investors with **3–5 year durations** overwhelmingly choose **monthly monitoring**, highlighting a balanced, long-view strategy.

Short-term (1–3 years) investors also primarily monitor monthly, suggesting a consistent monitoring style across horizons.

Long-term and <1 year investors are very few, but they also align with the monthly trend, reinforcing the dominance of monthly reviews.

Conclusion

The dataset shows that investors overwhelmingly prefer **medium-term (3–5 years) investments**, indicating a focus on balanced, sustainable growth.

Monthly monitoring is the dominant choice across all durations and objectives, reflecting a preference for **steady oversight** rather than frequent tracking.

Investment behaviour is **consistent across objectives**, suggesting that both risk- and returns-focused investors follow similar monitoring and duration patterns.

Overall, the data highlights a **stable, low-risk approach** with a strong inclination toward medium-term planning and regular, moderate monitoring.

TASK – 5
REASONS FOR INVESTMENT

SUMMARY

Cognifyz
Where Data Meets Intelligence

1.Respondent Overview

The survey includes **40 total respondents**, forming the basis of the investment-related insights.
On average, each respondent provided **4 reasons for investment**, showing diverse motivations.

2. Diversity of Investment Reasons

There are **12 unique reasons** identified across all respondents.
Reasons fall under three broad categories: **Returns**, **Safety**, and **Other**, each holding equal share in count (39 reasons each), highlighting balanced investor priorities.

3. Dominant Investment Motivations

The most cited reason is **Capital Appreciation** with **30 mentions**.
Assured Returns (26) and **Better Returns (24)** are also major drivers.
Safety-oriented reasons such as **Risk-Free (19)**, **Fixed Returns (18)**, and **Safe Investment (13)** remain significant. Lesser-cited reasons include **Dividend (8)**, **High Interest Rates (3)**, **Tax Benefits (3)**, **Liquidity (2)**, and **Tax Incentives (1)**.

4. Avenue-wise Patterns

Investors in **Bonds** lean heavily toward **Safety**-related reasons (39 mentions).
Equity investors primarily seek **Returns**, with 38 mentions of return-related motivations.
Mutual Funds show a mix of **Other (16)** and **Safety (24)** reasons, reflecting moderate-risk preference and diversified goals.

Conclusion

Investment Avenue Choices Reflect Motivation

Equity investors are primarily return-focused, bond investors seek security, and mutual fund investors display a blended strategy. This alignment indicates that respondents choose investment avenues that match their risk appetite and financial goals.

SUMMARY

1.Popularity of Information Sources
Financial Consultants are the **most popular source**, used by **16 respondents**.
Newspapers and Magazines follow closely with **14 respondents** relying on them.
Television is used by **6 respondents**, while **Internet** is the least used source with only **4 respondents**.

2. Percentage Distribution of Sources
Financial Consultants: 40%
Newspapers & Magazines: 35%
Television: 15%
Internet: 10%
This distribution highlights a strong preference for traditional, human-guided, and print media sources.

4. Age Group Distribution by Source

Financial Consultants: Used heavily by the **25–34 age group**, with minimal usage among 18–24 and 35–44 groups.

Newspapers & Magazines: Most favoured by the **25–34 age group**, with some usage among 18–24 and 35–44.

Television: Used by multiple age groups, but most significantly by the **25–34 age group**.

Internet: Predominantly used by the **25–34 age group**, with no significant distribution across the other groups.

Conclusion

Investors primarily depend on **financial consultants** and **print media**, showing strong trust in traditional and personalized sources over digital platforms. The **25–34 age group** is the most active across all channels, while online sources remain the least used. Overall, the data indicates a preference for **credible, expert-guided information** and limited reliance on internet-based financial content.

Conclusion

This project provides meaningful insights into investor behaviour by analysing their investment reasons and preferred information sources. The dashboards created present the data clearly, highlighting key patterns such as the preference for traditional information channels and the balance between safety and return-oriented motives. Overall, the study enhances understanding of factors that influence investment decisions and supports informed financial planning and advisory strategies.

Acknowledgement

I would like to express my sincere gratitude to Cognify for providing the guidance and platform that enabled me to complete this project independently. This project was done on my own, and I am thankful for the resources and support that made the work possible. I also appreciate all the respondents for providing the data that helped generate meaningful and actionable insights.
